

# SPECIFICATION of TURF SEED MIXTURES

Sown in 2019 for TURF SALES during 2020 / 2021

<b><u>SG 2</u></b>	35 %	BARCRISTALLA	-	Amenity / Dwarf Perennial Ryegrass
	35 %	NICOLE	-	Slender Creeping Red Fescue
	30 %	BARJESSICA	-	Strong Creeping Red Fescue
	100 %			

- SG 2** - Formulated to provide a dense, compact sward with a vigorous root system, that has a high degree of wear tolerance, and recovers quickly from drought conditions.  
A result of the inclusion of **Barcristalla**, a top - rated Amenity / Dwarf Perennial Ryegrass ( according to the *Sports Turf Research Institute's* TURFGRASS SEED 2019 BUYERS GUIDE showing ratings for Shoot Density, Fineness of Leaf, Tolerance of Close Mowing, Disease, Cleanness of Cut etc. ).
- Suitable for regularly used lawns, commercial landscaping, residential developments, orchards, areas where regular watering in dry conditions is a problem etc.
  - Highly recommended by the groundsmen & gardeners who have used it. Supplied by Barenbrug.

- "Down - Graded" Seeded Turf** - The "Headlands" of our fields where a few 'wild' / agricultural grasses have crept into the sward.
- No guarantee on a uniform quality.
  - Better than a Meadow / Field turf, but not as good as the **SG2**

7 / 19

**N.B.** ALL lawns, including those laid with **SG2** or "**Down - Graded" Seeded Turf**, need regular and appropriate Maintenance using the correct tools and equipment ( Mower with sharp blades, edging, watering with bar sprinklers when dry, monthly fertilising with "*Growmore*" [ a little and often applied during wet conditions is ideal ], applying a *herbicide* when necessary to control weeds & moss, or *biological agents* to help control the spread of leatherjackets, chafer grubs, ants, moles etc. ).

Settlement & Compaction, usually to varying degrees & severity over the lawn area, will also occur over time. However, providing Topdressing ( with a suitable topsoil / sand mix ) is carried out as soon as any dips appear, combined with Spiking / Aerating when necessary, then your lawn should stay in tip - top condition in the years to come.

The more T.L.C. a lawn receives the better it will look and the longer it will last!

**Poa Annua** ( *Annual Meadow Grass* ) is present to varying degrees in all lawns new & old and there is NO chemical control available.

Likewise there is now NO chemical control to combat **Leatherjackets** & **Chafer Grubs** so some may be present when turf is delivered.

**Your old lawn / garden will also harbour them to some degree.**
